Morsettiera / Connection

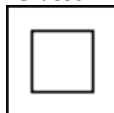

Classe I

Gli apparecchi appartenenti a questa classe di isolamento sono apparecchi nei quali la protezione non si basa unicamente sull'isolamento principale, ma anche su una misura di sicurezza supplementare costituita dalla connessione delle parti conduttrici accessibili ad un conduttore di protezione che fa capo all'impianto elettrico fisso, contraddistinto dal doppio colore giallo/verde, in modo tale che le parti conduttrici accessibili non possano andare in tensione in caso di guasto dell'isolamento principale.

Classe II

Gli apparecchi di classe II, detti anche a **doppio isolamento**, sono progettati in modo da non richiedere (e pertanto non devono avere) la connessione di messa a terra. Sono costruiti in modo che un singolo guasto non possa causare il contatto con tensioni pericolose da parte dell'utilizzatore. Ciò è ottenuto in genere realizzando l'involucro del contenitore in materiali isolanti, o comunque facendo in modo che le parti in tensione siano circondate da un doppio strato di materiale isolante.
